AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0035] with the following:

[0035] The agents can interpret similar or even identical terms or definitions contextually. For example, acronyms used within different resources must be interpreted differently to avoid returning non-pertinent inputs to a search. As an example, one resource might use a term such as TCS, which in one instance stands for Tactical Control Station while in another instance TCS stands for Time Critical Strike. The agents are able to tag a term, such as the above acronyms and contextually relate the term with its source. This allows the terms to be differentiated and properly used, thus maintaining the integrity of the assigned meaning. This avoids the time consuming processes that requires manually filtering searches or conducting multiple limited searches which are the.
